

Brainstorming & Idea Prioritization

A Comprehensive Measure of Well-Being | HDI Predictor

Problem Space

Global inequality in human development is difficult to measure and communicate. We need a tool that makes HDI computation accessible to researchers, students, and policymakers.

Ideas Generated

- Interactive HDI calculator using UNDP formula
- World map choropleth showing HDI tiers
- Country comparison dashboard
- Historical trend visualizer (2010–2024)
- ML model predicting HDI from socio-economic inputs

Prioritized Idea

We selected the HDI Predictor web app as it is impactful, feasible within the timeline, and directly uses the official UNDP geometric mean formula.

Why This Idea?

- Direct real-world impact on development awareness
- Implements actual UNDP methodology
- Accessible to non-technical users
- Can be extended with ML model in Flask backend
