

Code Layout, Readability & Reusability

A Comprehensive Measure of Well-Being | HDI Predictor

Code Organization

- Modular file structure (routes, components, lib, hooks)
- Single responsibility principle per file
- TypeScript interfaces for type safety
- Utility functions in src/lib/utls.ts

Readability Practices

- Descriptive variable names (lifeldx, eduldx, incldx)
- Inline comments for UNDP formula steps
- Consistent 2-space indentation
- Prettier formatting enforced

Reusability

- component reused for all 4 inputs
- computeHDI() function is pure and testable
- tierOf() function decoupled from UI
- Country presets as a reusable COUNTRIES constant

Code Quality Tools

- ESLint — static code analysis
- Prettier — code formatting
- TypeScript strict mode — type safety
- TanStack Router — file-based routing convention
