

Functional Features

A Comprehensive Measure of Well-Being | HDI Predictor

Feature 1: Country Presets

20 countries with auto-filled UNDP HDR 2023/24 values. Selecting a country auto-populates Life Expectancy, MYS, EYS, and GNI fields.

Feature 2: Real-time HDI Computation

Instant client-side HDI calculation using official UNDP geometric mean formula. No API calls — works offline.

Feature 3: Tier Classification

Results classified into 4 tiers with color coding: Very High (emerald), High (sky), Medium (amber), Low (rose).

Feature 4: Custom Input

Users can override any preset value and compute HDI for hypothetical scenarios.

Feature 5: Responsive UI

Works on mobile, tablet, and desktop. Dark world-map themed background with animated particles.

Feature 6: Flask ML Backend

Alternative backend using Linear Regression model trained on 195-country dataset. Supports internet users as additional feature.
